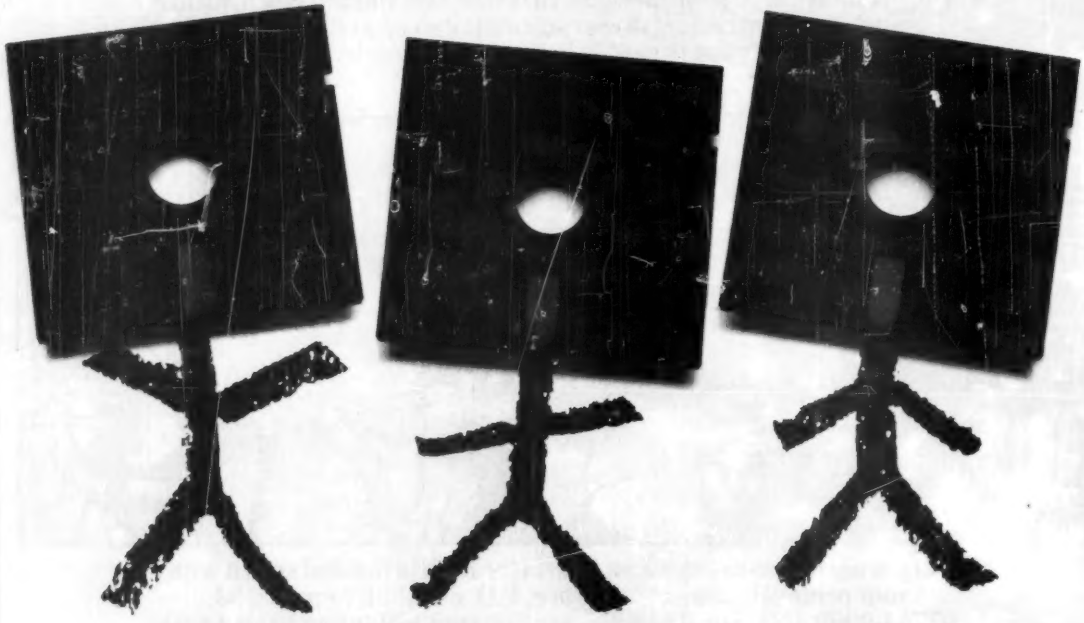
RESEARCH ASSISTANTS.



...tireless, accurate, and always on time.

Together, they're called the Sci-Mate® Software System, and they produce everything from initial research to correctly referenced manuscripts.

With the Searcher, a PC, and a modem, search online databases for the information you want. No need to learn special languages and symbols. The Searcher understands and uses plain English.

With the Manager, replace a desk full of index cards. File references from online databases, or enter your own information. The Manager keeps everything—references, lab notes, memos, addresses—up to date and in order.

With the Editor—an expert copy chief—format your references in one bibliographic style. Then reformat them in another—instantly. Pop a reference in your manuscript or bury it in a footnote. The Editor takes the tedium out of responsible scholarship.

Hire the Sci-Mate® assistants. Individually or together, they make research fast, simple, and productive.
